According to the industrial use, the food additives are classified into 25 classes, which include about 230 different compounds. Some compounds present more than one principal action, due to their different functionalities, which are dependent on the added quantities and processing mode of the food.

Atmospheric chemistry is a branch of atmospheric science in which the chemistry of the Earth's atmosphere and that of other planets is studied. It is a multidisciplinary approach of research and draws on environmental chemistry, physics, meteorology, computer modeling, oceanography, geology and volcanology and other disciplines. Research is increasingly connected with other areas of study such ...

for the molal (m) case, where a_{H^+} is the hydrogen ion activity, γ_{H^+} and f_{H^+} are activity coefficients of the hydrogen species in their respective proton scales. pH can be measured based on multiple assumptions, which we will discuss below. Also, chemical equilibrium models can be used to calculate activity coefficients and solution concentrations, which allow estimation of pH.

In chemical synthesis, "click" chemistry is a class of biocompatible small molecule reactions commonly used in bioconjugation, allowing the joining of substrates of choice with specific biomolecules. Click chemistry is not a single specific reaction, but describes a way of generating products that follow examples in nature, which also generates substances by joining small modular units.

About this collection. Noncovalent interactions (hydrogen, aerogen, halogen, chalcogen, pnictogen, tetrel and icosagen bonds, as well as cation- π , anion- π , lone pair- π , π - π stacking, agostic, pseudo-agostic, anagostic, dispersion-driven, lipophilic, etc.) concern weak forces of attraction formed between different molecules (intermolecular) or fragments of the same molecule (intramolecular).
