FFT convolution uses the principle that multiplication in the frequency domain corresponds to convolution in the time domain. The input signal is transformed into the frequency domain using the DFT, multiplied by the frequency response of the filter, and then transformed back into the time domain using the Inverse DFT.

Needed to put you one little bit of remrak to say thank you yet again for all the precious opinions you have contributed in this article. This is certainly surprisingly generous of you to supply unhampered all most people might have sold for an electronic book to help make some dough on their own, particularly given that you might well have done it in case you desired.
